

## Non-Synchronous PWM Boost Controller

### General Description

The FP5202 is a boost topology switching regulator for wide operating voltage applications. It provides built-in gate driver pin for driving an external N-MOSFET. The internal compensation network minimizes external component counts, and the non-inverting input of error amplifier connects to a 0.6V precision reference voltage. The FP5202 has internal soft start and programmable over current protection set by external resistance.

The FP5202 is available in the small footprint SOT23-6L package to fit in space-saving PCB layout for miscellaneous application fields.

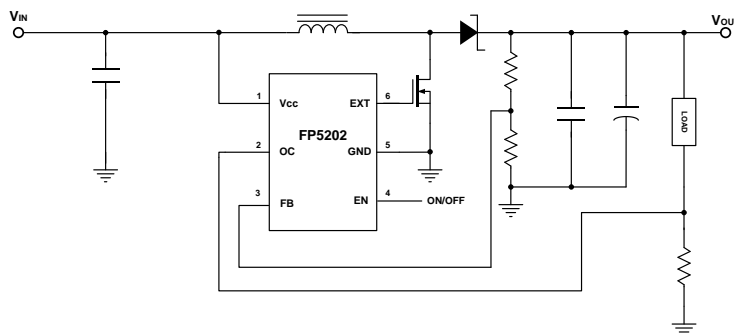

### Features

- Wide Supply Voltage Operating Range: 2.4 to 5.5V
- Precision Feedback Reference Voltage: 0.6V ( $\pm 2\%$ )
- Shutdown Current:  $< 1\mu\text{A}$
- Internal Fixed PWM frequency: 550KHz
- Internal Soft Start Function :7ms (SS)
- Over Current Protection Function (OCP)
- Over Voltage Protection
- Package: SOT23-6L
- Duty Cycle: PWM/PFM Switching Control Circuit (15%~90%)

### Applications

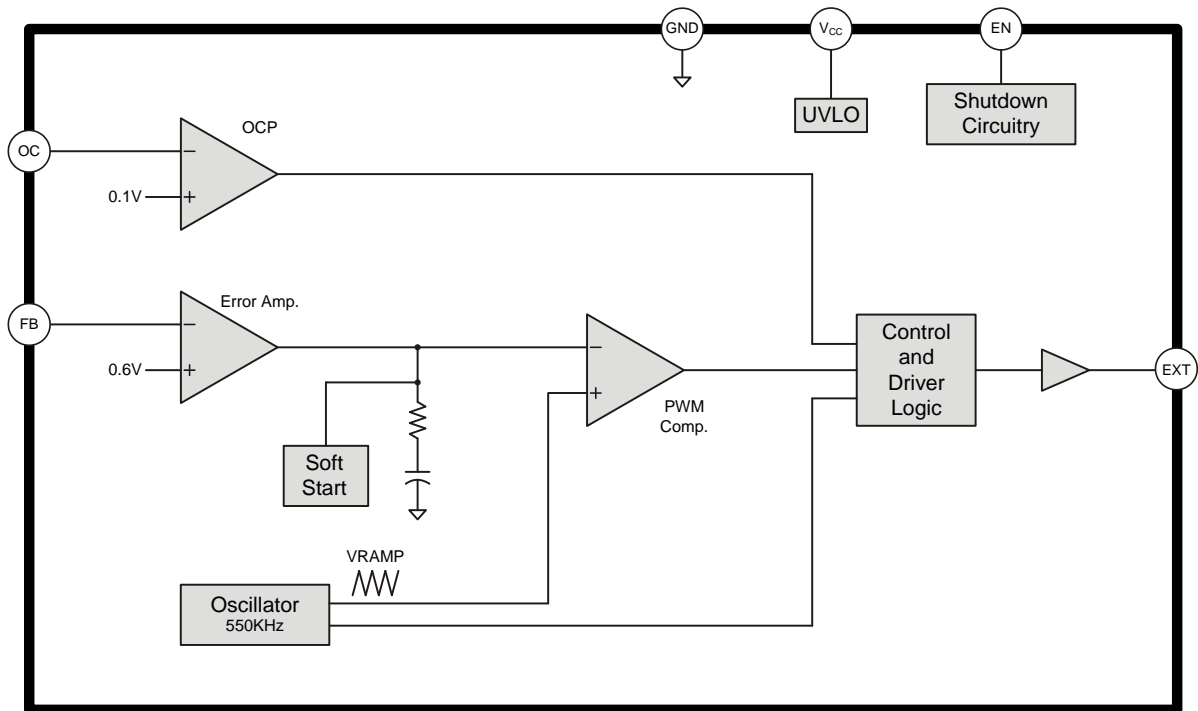

- Chargers
- LCD Displays
- Digital Cameras
- Handheld Devices
- Portable Products

### Typical Application Circuit

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.

## Function Block Diagram

## Pin Descriptions

### SOT23-6L

Name	No.	I / O	Description
Vcc	1	P	IC Power Supply
OC	2	I	Adjustable Output Current Protection
FB	3	I	Error Amplifier Inverting Input
EN	4	I	Enable Control (Active High)
GND	5	P	IC Ground
EXT	6	O	External Transistor Connection Pin

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.

## Marking Information

SOT23-6L

**Lot Number:** Wafer lot number's last two digits

For Example: 132386TB → 86

**Year:** Production year's last digit

**Part Number Code:** Part number identification code for this product. It should be always "AV".

## Ordering Information

Part Number	Code	Operating Temperature	Package	MOQ	Description
FP5202LR-G1	AV	-25°C ~ 85°C	SOT23-6L	3000EA	Tape & Reel

## Absolute Maximum Ratings

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Supply Voltage	$V_{CC}$		0		5.5	V
EN,FB Voltage			0		5.5	V
Power Dissipation	$P_D$	SOT23-6L @ $T_A=25^\circ\text{C}$			455	mW
Thermal Resistance (Note1)	$\theta_{JA}$	SOT23-6L			+220	$^\circ\text{C} / \text{W}$
Junction Temperature	$T_J$				+150	$^\circ\text{C}$
Operating Temperature	$T_{OP}$		-25		+85	$^\circ\text{C}$
Storage Temperature	$T_{ST}$		-65		+150	$^\circ\text{C}$
Lead Temperature		(soldering, 10 sec)			+260	$^\circ\text{C}$

## IR Re-flow Soldering Curve

## Recommended Operating Conditions

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Supply Voltage	$V_{CC}$		2.4		5.5	V
Operating Temperature Range	$T_A$	Ambient Temperature	-25		+85	°C

## DC Electrical Characteristics ( $V_{CC}=3.3V$ , $T_A=25^\circ C$ , unless otherwise specified)

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
<b>System Supply Input</b>						
Input Supply Range	$V_{CC}$		2.4		5.5	V
Under Voltage Lockout	$V_{UVLO}$			2.1		V
UVLO Hysteresis				0.1		V
Quiescent Current	$I_{CC}$	FB=1.0V, No switch		70		$\mu A$
Shutdown Current	$I_{CC}$	$V_{EN}=GND$		0.1		$\mu A$
<b>Oscillator</b>						
Operation Frequency	$f_{OSC}$	$V_{FB}=0.6V$		550		kHz
PFM Switching Duty Ratio	%			15		%
Maximum Duty Ratio	%			90		%
Soft-Start Time	$t_{SS}$	$V_{CC}=5V$		7		ms
<b>Reference Voltage</b>						
Feedback Voltage	$V_{REF}$	$V_{CC}=5V$	0.588	0.6	0.612	V
<b>Enable Control</b>						
Enable Voltage	$V_{EN}$		0.96			V
Shutdown Voltage	$V_{EN}$				0.6	V
<b>External Transistor Connection current</b>						
EXT Pin Output Current	$I_{EXTH}$			-105		mA
EXT Pin Output Current	$I_{EXTL}$			130		mA

## Function Description

### Operation

The FP5202 is a voltage mode boost controller. It operates with pulse width modulation (PWM) at fixed 550kHz switching frequency. An internal resistive divider provides 0.6V reference for the error amplifier. The FP5202 changes to PFM mode when output is light load. It can increase efficiency, but PFM mode also increases output voltage ripple.

### Soft Start Function

Soft start circuitry is integrated into FP5202 to avoid inrush current during power on. After the IC is enabled, the output of error amplifier is clamped by the internal soft-start function, which causes PWM pulse width increasing slowly and thus reducing input surge current.

### Over Current Protection

The FP5202 provides an output current limit protection function. The circuit is shown in Figure 1. The output current limiting will be activated when the OC pin voltage is higher than 0.1V.

To set the over current trip point, follow below equation:

$$I_{OCP} = \frac{0.1}{R_{oc}}$$

Figure1. OC pin circuit

### Shutdown Function

Drive Enable pin to ground to shut down the FP5202. Shutdown mode forces to turn off all internal circuitry, and reduces the  $V_{cc}$  supply current to  $0.1\mu A$  (typ). The Enable pin rising threshold is  $0.96V$  (typ). Before any operation begins, the voltage at Enable pin must exceed  $0.96V$  (typ).

## Application Information

### Inductor Selection

Inductance value is decided based on different condition. 3.3uH to 4.7μH inductance value is recommended for general application circuit. There are three important inductor specifications, DC resistance, saturation current and core loss. Low DC resistance has better power efficiency.

### Capacitor Selection

The output capacitor is required to maintain the DC voltage during switching. Low ESR capacitors are preferred to reduce the output voltage ripple. Ceramic capacitor of X5R and X7R are recommended, which have low equivalent series resistance (ESR) and wider operation temperature range.

### Diode Selection

Schottky diodes with fast recovery times and low forward voltages are recommended. Ensure the diode average and peak current rating exceed the average output current and peak inductor current. In addition, the diode's reverse breakdown voltage must exceed the output voltage.

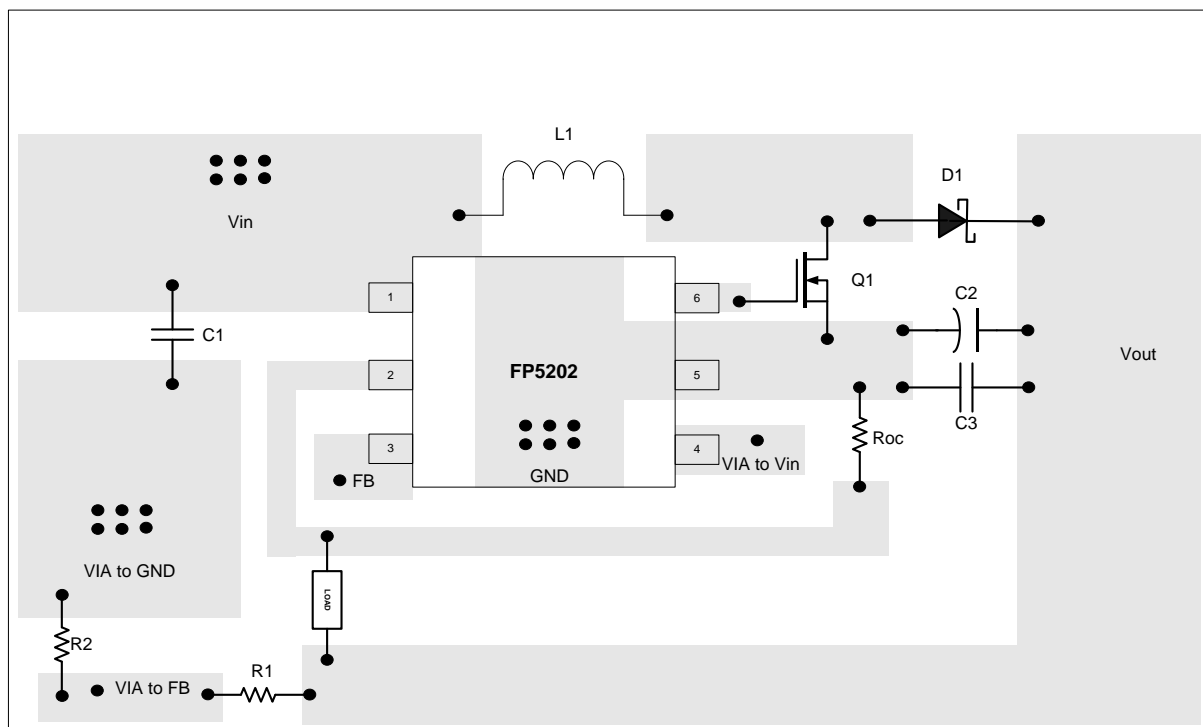

### Output Voltage Programming

The output voltage is set by a resistive voltage divider from the output voltage to FB. The output voltage is:

$$V_{OUT} = 0.6V \left( 1 + \frac{R1}{R2} \right)$$

### Layout Considerations

1. The power traces, consisting of the GND trace, the MOS drain trace and the  $V_{CC}$  trace should be kept short, direct and wide.
2. Layout switching node MOS drain, inductor and diode connection traces wide and short to reduce EMI.
3. Place  $C_{IN}$  nearby  $V_{CC}$  pin as closely as possible to maintain input voltage steady and filter out the pulsing input current.
4. The resistive divider R1 and R2 must be connected to FB pin directly and as closely as possible.
5. FB is a sensitive node. Please keep it away from switching node, MOS drain.
6. The GND of the IC,  $C_{IN}$  and  $C_{OUT}$  should be connected close and together directly to a ground plane.
7. OC pin is a sensitive node. Roc must be connected to IC GND pin directly as closely as possible.
8. OC pin is not connected (floating) when OC function is disabled. Don't connect to GND directly.
9. The output capacitor C2 and C3 should be connected close and together directly to the source of MOS.

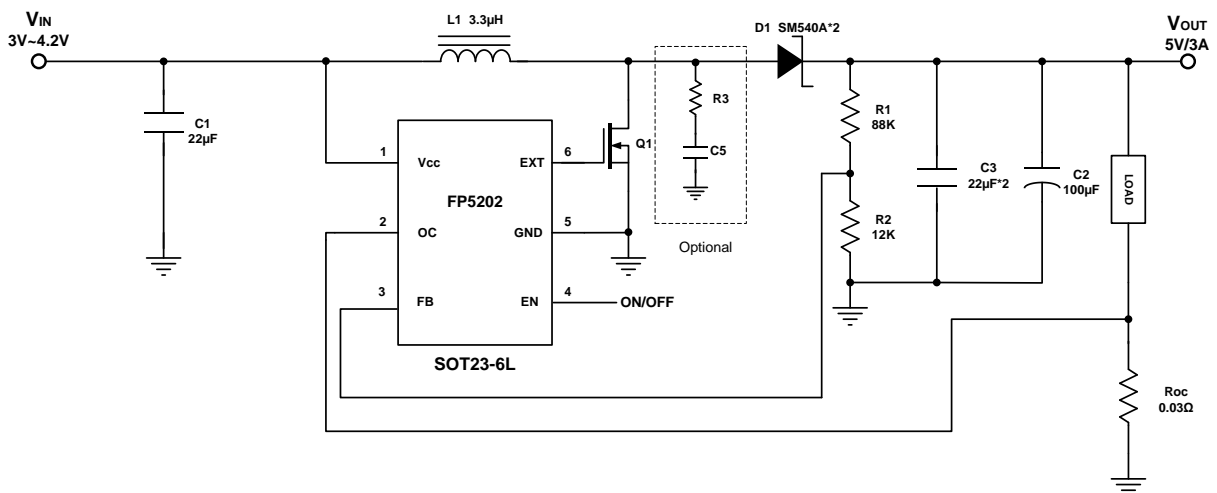

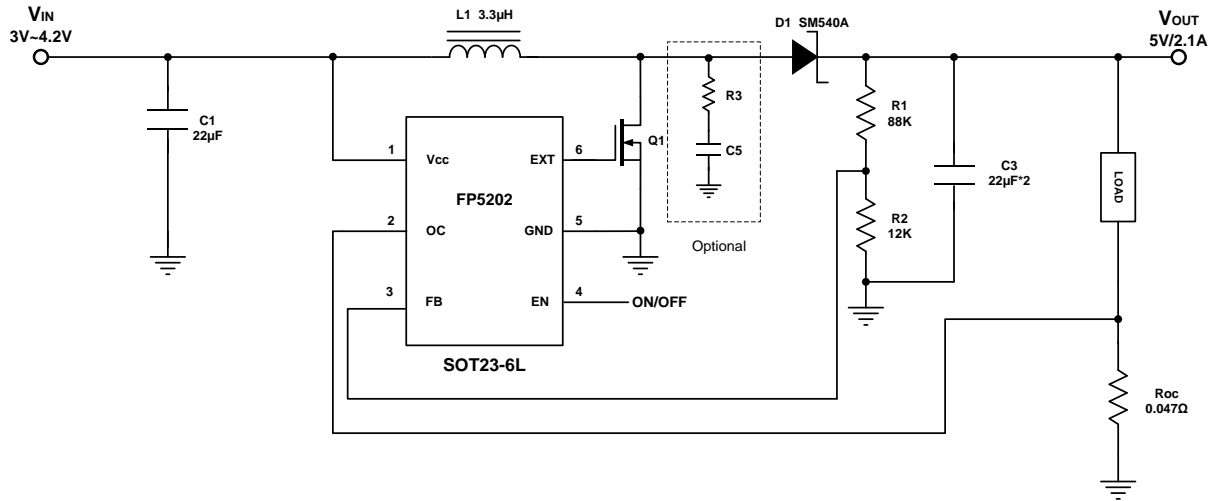

### Suggested Layout

This datasheet contains new product information. Feeling Technology reserves the rights to modify the product specification without notice. No liability is assumed as a result of the use of this product. No rights under any patent accompany the sales of the product.

## Application Information

### Note:

1. C1 and C3 choose ceramic capacitor of X5R or X7R.
2. R3 and C5 are added for reducing EMI (Electromagnetic Interference).

## Package Outline

SOT23-6L

Unit: mm

Symbols	Min. (mm)	Max. (mm)
A	1.050	1.450
A1	0.050	0.150
A2	0.900	1.300
b	0.300	0.500
c	0.080	0.220
D	2.900 BSC	
E	2.800 BSC	
E1	1.600 BSC	
e	0.950 BSC	
e1	1.900 BSC	
L	0.300	0.600
L1	0.600 REF	
L2	0.250 BSC	
$\theta^\circ$	0°	8°
$\theta1^\circ$	3°	7°
$\theta2^\circ$	6°	15°

### Note:

1. Package dimensions are in compliance with JEDEC outline: MO-178 AB.
2. Dimension "D" does not include molding flash, protrusions or gate burrs.
3. Dimension "E1" does not include inter-lead flash or protrusions.
